Silver Diamine Fluoride (SDF) - A new dental treatment to fight cavities

BENEFITS OF SDF: Dental cavities are common in children, but now our dentists have a safe, painless alternative to traditional cavity drilling procedures called silver diamine fluoride (SDF). SDF is an FDA-approved antibiotic liquid used to help prevent cavities from forming, growing, or spreading to other teeth. The dentist simply brushes SDF on back teeth only.

Alternatives

- No treatment: The tooth may continue to decay and cause pain.
- Other options: fluoride varnish, a filling or crown, or extraction of the tooth.

Risks

- SDF treatment may not eliminate the need for a traditional filling.
- It's normal for SDF to stain the cavity brown or black—it means it's working.
- The healthy parts of the tooth will not be stained.
- SDF can cause temporary staining if it comes into contact with skin. The stain is harmless and should disappear in less than a week.
- SDF may cause a temporary metallic taste.
